# Garrett Rose

## Application for Jr. Web Developer

Dear Sir/Madam

My name is Garrett Rose and I am experienced in multiple web development languages and frameworks. I have utilized my Javascript, CSS, and html knowledge to develop web applications tools, and websites through my passion for the web. I have worked with technologies including web Api's, databases, command line interfaces, and version control in the form of git.

I feel that I would be a valuable team member in this position because I am a committed learner. I believe that learning never truly ends and that making features and diminishing bugs should be of utmost importance. I also am a firm believer in not stopping your learning at the company level, but continuing personal learning based through passion and curiosity.

Thank you for considering my credentials and I hope to address more topics that excite me in the interview.

Sincerely,

Garrett Rose

### Skills

**HTML (CSS),**  
**Javascript (React Node Vue Angular Express NodeJs Handlebars.Js),**  
**C++ (C),**  
**Python (Django Flask NumPy TensorFlow PyGame)**

### Qualifications

- **Possesses the ability to create web pages from scratch using HTML, CSS, and Javascript.**
- **Uses git version control to record and implement proper organization of branches for managing web content.**
- **Fundamentally developed team member and problem solver due to Marine Corps, and electrical industry experiences.**

### Education

#### Winthrop University

Completed CS courses including Intro to web development, Data structures and Algorithms, and Web design

#### Gaston College

Completed courses in information technology, and intro to programming with C++

### Projects

#### OSRS GE Price Tracker

##### — Js price tracker for Old School RS

Great learning experience to fetch data from an api. The Api was live updated so the application pulled live price data through a search function made in vanilla js.

#### Reusable-Form

PHP form that submits to SQL DB

First experience incorporating a database with backend code. Many great learning experiences about filters, how to access data and push data to a database.

#### Login-system— Complete PHP login system

An actually complete login system for users made in php.

#### Typing Game— C++ user input game

Simple command line based game that prompts the user to type a randomly chosen name from a list in a time limit.
